

Assignment 6a

Cart Original to Cart Low Fidelity to Cart Final

Cart Original was the cart I made for my High Fidelity design iteration. From this I drew out a low-fidelity sketch with some changes. I made both the Frosting and Quantity dropdowns, which the users previous selection as the default. This way the edit button wasn't needed, and the user could quickly edit the frosting and quantity of the order. I also removed the extra checkout button and kept one to keep it simple.

For Cart Final I moved the price to be inline with Delete and Duplicate. I also removed "Summary" because it didn't add value to the page. For the actual page the drop downs look different because of how they work in html.
